

# HOW TO USE GABION Stone Separating Panels

## What You'll Need:

- Gabion baskets
- Stone separating panels
- Tying wire
- Protective gloves
- Wire cutter

### 1 Select the Right Panel

To select the appropriately sized panel, simply measure the length and height of the gabion you plan to use.

This will determine the length and height of your stone separating divider.

### 2 Position the Panel

Place the partition inside the gabion, positioning it at the center of the basket's depth.

### 3 Secure Panel at the Top

Start securing the partition to the top of the gabion mesh on both sides using the tying wire included with your basket.

### 4 Continue Securing

Continue securing the panel with the tying wire, working your way down until you reach the bottom.

### 5 Cut Off the Excess Wire

Use wire cutters to cut any excess tying wire once the panel is fully secured.

### 6 Fill the Back Compartment

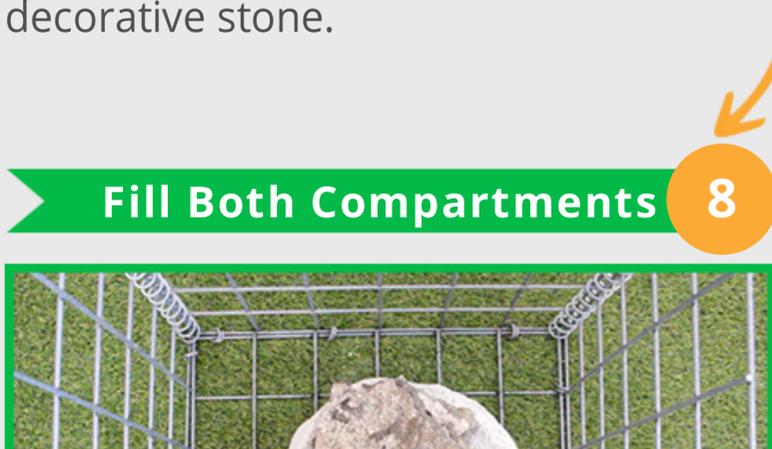

Start filling the back compartment with inexpensive rubble.

### 7 Fill the Front

Fill the front compartment with decorative stone.

### 8 Fill Both Compartments

Once both compartments are filled, ensure the gabion is stable and securely fasten the lid to complete the installation.
