

## DOG FENCING INSTALLATION With Panels

### THINGS YOU'LL NEED

- Dog Fence Panels
- T Posts
- Cable ties
- Tape measure
- Post driver
- Spirit level
- Pegs
- Spade
- Cement (optional)

**INSTRUCTIONS****Step 1: Mark the Location**

Create a straight line to outline the fence between the two end posts.

**Step 2: Measure Post Distance**

Use your panels to measure the post distance.

**Step 3: Install End Posts**

Use a post driver or mallet to sink the end posts 50cm into the ground.

Make sure the end posts are pointing in the same direction.

#### Step 4: Check for Same Height

Attach a string across the end posts, and check the height of their installation using a tape measure.

#### Step 5: Check for Straightness

Ensure that the posts have been installed completely straight by using a spirit level.

#### Step 6 (Optional): Set in Concrete

For a sturdier and more reliable fence, enhance its stability by setting your posts in concrete. This involves digging a 50cm hole and pouring cement to create a foundation for the posts.

### Step 7: Install Middle Posts

Follow steps 3 through 6 to install the middle posts.

### Step 8: Attach Panel to Posts

Start at the end post and secure the mesh to it by using cable ties. These ties can be threaded through the pre-drilled holes in the post.

You can add extra cable ties to encircle the entire post.

### Alternative Option:

Expand the gap between the posts by overlapping the panels and join them by fastening them together using cable ties.

### **Additional Step to Prevent Digging:**

Dig a trench along your fence line and cover the trench's bottom with a shorter panel or a piece of welded wire. Attach it to the panel by using cable ties.

Use pegs to secure the wire to the ground at every 60cm, then cover it by adding a layer of soil or mulch over it.
