

DOG FENCING INSTALLATION

For Small Dogs

THINGS YOU'LL NEED

- [Welded wire mesh](#)
- [T posts](#)
- Post driver
- [Cable ties](#)
- [Pegs](#)
- Pliers
- Hammer
- Wire cutters
- Spade
- Cement (optional)

INSTRUCTIONS**Step 1: Mark the Location**

Create a straight line to outline the fence between the two end posts.

**Step 2: Measure Post Distance**

Mark the post locations, maintaining a 2-3m spacing between them.

**Step 3: Install End Posts**

Use a post driver or mallet to sink the end posts 50cm into the ground.

Make sure the end posts are pointing in the same direction.

Step 4: Check for Same Height

Attach a string across the end posts, and check the height of their installation using a tape measure.

Step 5: Check for Straightness

Ensure that the posts have been installed completely straight by using a spirit level.

Step 6 (Optional): Set in Concrete

For a sturdier and more reliable fence, enhance its stability by setting your posts in concrete. This involves digging a 50cm hole and pouring cement to create a foundation for the posts.

Step 7: Install Middle Posts

Use a post driver or mallet to drive the end posts 50cm into the ground.

Ensure both end posts face the same direction.

Step 8: Attach Mesh to End Post

Start at the end post and secure the mesh to it by using cable ties. These ties can be threaded through the pre-drilled holes in the post.

You can add extra cable ties to encircle the entire post.

Step 9: Attach Mesh to Posts

Secure the remaining part of the mesh by following the steps described in step 8.

Additional Step to Prevent Digging:

Dig a trench along your fence line, then fold the bottom of the mesh at a 90-degree angle to form a 15cm lip. This extension will cover the trench's bottom.

Use pegs to secure the extension to the ground at every 60cm, then cover it by adding a layer of soil or mulch over it.
