FREESTANDING DOG BARRIER INSTALLATION

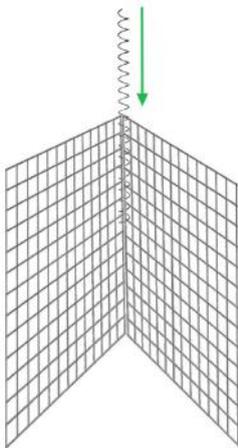

THINGS YOU'LL NEED

- [Freestanding Dog Barrier Kit](#)
- Protective Gloves
- Pliers
- (Optional) Bolt Anchors
- (Optional) Bolts
- (Optional) Clamping Plates
- (Optional) [Staples](#)
- (Optional) Wire Clips
- (Optional) [Cable Ties](#)

Step 1: Unpack the barrier kit and count all of the parts.

You should have the same number of panel connectors and panels.

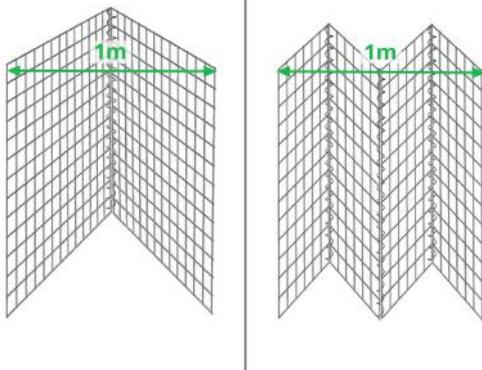

Step 2: Connect the panels by twisting the connectors down the joints.

**Step 3:** Repeat Step 2 to connect all joints.

Step 4: To make the structure safer for your furry friend(s), fold down the top of the spiral connector so that no pointy wires are poking out of the top of the fence.

Step 5: The panels can now be readjusted to be freestanding. 1m length of foldable dog fence can be achieved by:

- placing two 97.5cm wide panels at an approximate angle of 45 degrees; or
- placing four 45cm wide panels at an approximate angle of 22.5 degrees

NOTE: Smaller or bigger angles can be used as long as the barrier is freestanding, and depending on the area you'd need to fence in.

Step 6: You can let your dog out and watch them enjoy their freedom safely. 😀

Use extra helical to connect two kits together

With the extra helical connector, you can attach one kit to another to create custom lengths of freestanding dog barriers with ease.

NOTE: You can use the same technique to attach the kits to most types of wire mesh fencing as well.
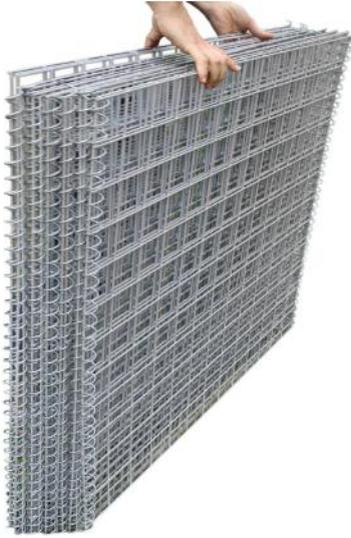

USE AS FENCING

These kits are also suitable to be used as easy-to-install regular fences, but for this, it would be necessary to attach them at both ends.

How to attach to different materials:

- **Concrete and brick**: Anchors with screws and clamping plates
- **Wood**: Staples
- **Metal**: Screws and clamping plates or cable ties
- **Posts**: Cable ties or wire clips

WireFence

You can use this kit as a temporary barrier and fold it up whenever it's not required.

You can even take it camping with you and create a portable dog enclosure in case your dog is not very keen on escaping. Example installation of a similar temporary dog pen can be found here.
