

HOW TO MAKE A CHRISTMAS LIGHT BALL WITH CHICKEN WIRE

Step by Step Guide

What You'll Need:

- Wire Cutters
- Chicken Wire

- Christmas Lights
- Thin Lacing Wire

Step 1

Roll out the chicken wire. For the piece to be round, you will need twice the length of the width. Cut the measured amount of the roll.

Step 2

Roll the wire into a cylinder and connect the ends with the small bits. Twist them around each other.

Step 3

Once the ends are connected, it should look like this.

Step 4

Push both ends of the mesh towards the middle of the cylinder.

Step 5

Once both ends are pushed in, it should look something like this.

Step 6

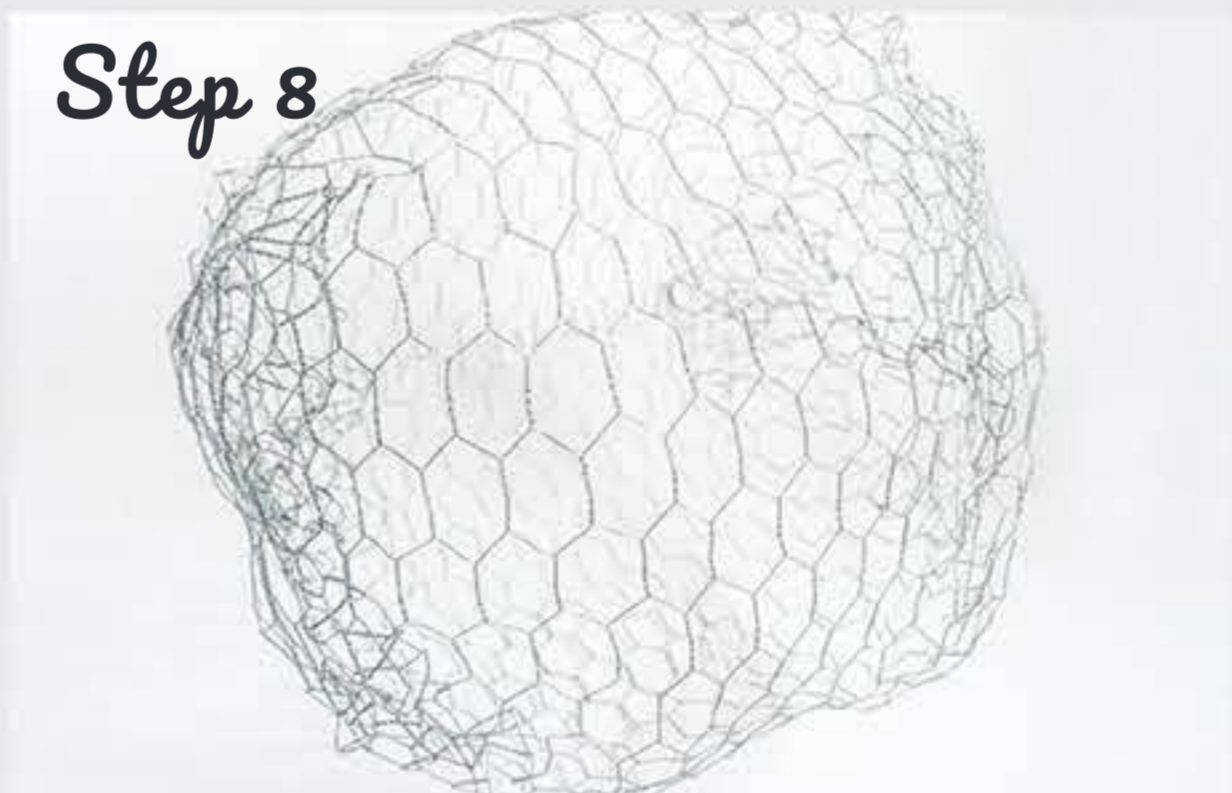

Trim the edges of the mesh so you can create the round shape.

Step 7

Push and pull the wire until you get the right shape. This step is more of trial and error until you get it right.

Step 8

The ball will not be exactly round, so try to get as close to it as possible.

Step 9

Wrap the mesh in Christmas lights.

Step 10

Fix the end of the strand to the ball. You can turn the lights on and the chicken wire Christmas light ball is done.
