# How to Stop Dog from Jumping Over a Fence

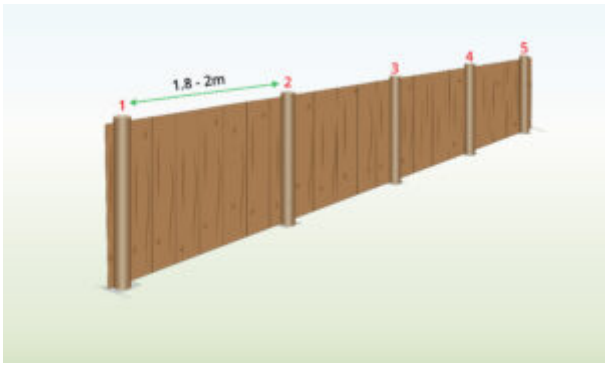

Last updated 2 November 2026

Below you will find a step-by-step guide on how to stop dog from jumping over a fence made from different materials.

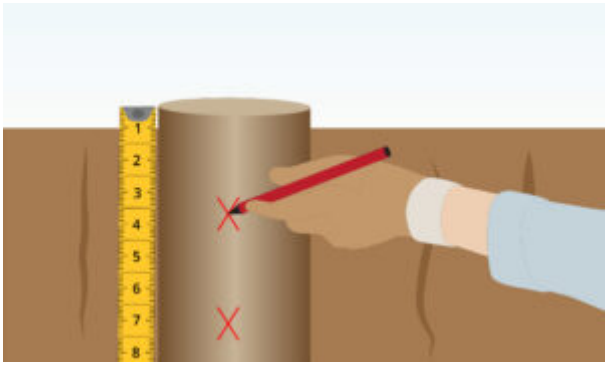

- **Experience Required:** Medium
- **Tools Required:** Protective gloves, Wire cutter, Tape measure, Hammer, Plier, Marker
- **Materials Required:** Dog fencing, Staples, Cable ties, Brackets, Screws

## Method A – Step 1) Calculate Number of Brackets

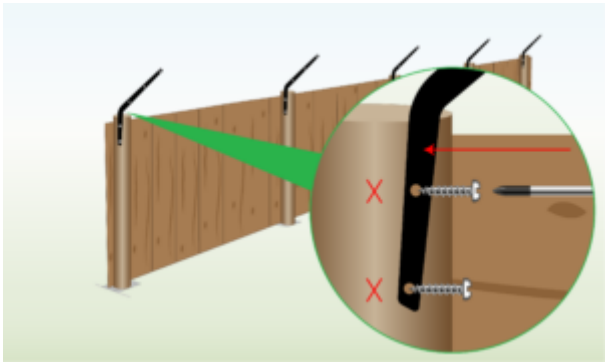

- If you have any posts, it is recommended to use one bracket for each post.
- In general, the brackets should be spaced at intervals of approximately 2m.

## Method A – Step 2) Mark Bracket Placement

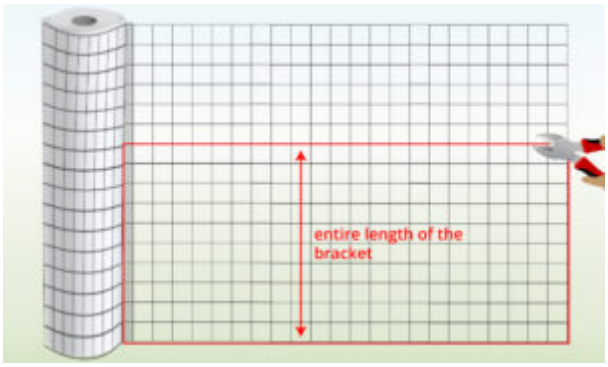

- Make use of a tape measure and marker to indicate where the brackets should be secured to the fencing.

## Method A – Step 3) Secure Brackets

- Use wood screws to attach the brackets in the marked locations.
- Continue this process until the entire area is complete.

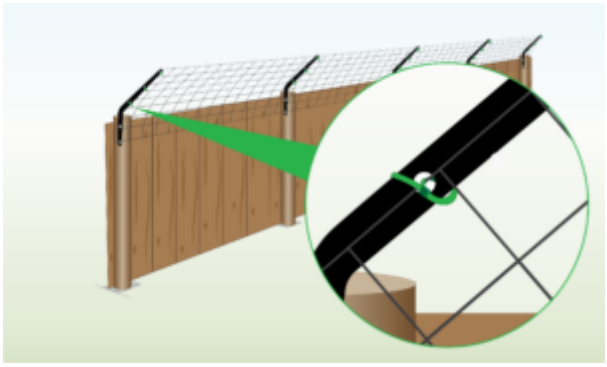

## Method A – Step 4) Shorten Mesh

- Select a mesh roll with a height that matches the length of the brackets.

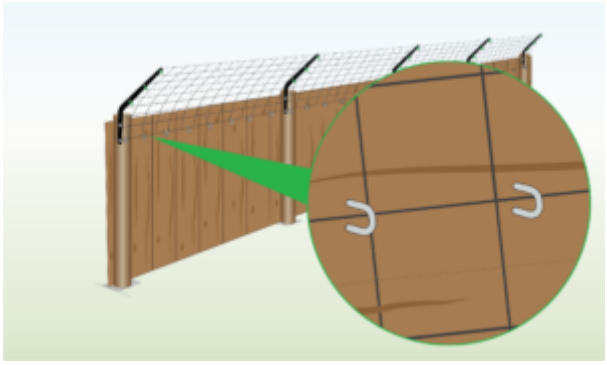

- If your mesh roll is taller, measure the length of the bracket and cut along the marked line using wire cutters.

### Method A – Step 5) Secure Mesh to Brackets

- Use cable ties to secure the mesh to the pre-drilled holes in the brackets.
- If there are no pre-drilled holes, loop the cable ties around the entire bracket instead.

### Method A – Step 6) Attach Mesh to Wood

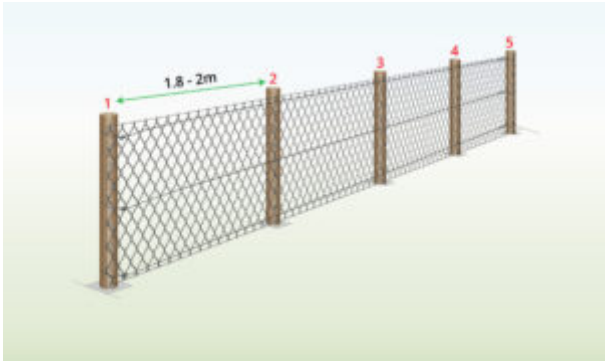

- Attach the bottom of the mesh to the wood using staples placed at 15 cm intervals.

### Method A – Step 7) Complete & Inspect

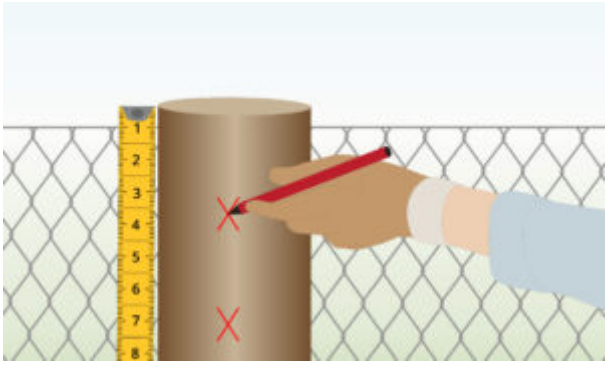

- Ensure you check the netting thoroughly for any weak spots to eliminate gaps or wiggle room.

## Method B – Step 1) Calculate Number of Brackets

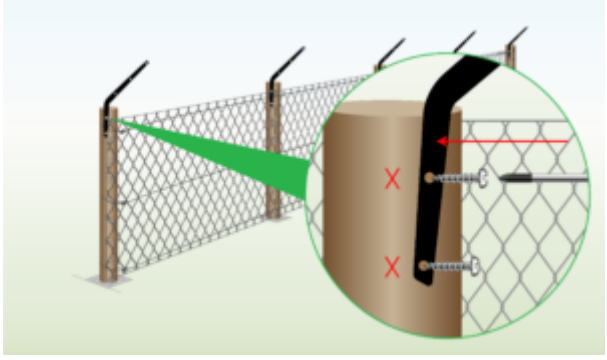

- Method B on how to stop dog from jumping over a fence: it is recommended to use one bracket for each post.
- Typically, it is recommended to place a bracket at intervals of approximately 2 metres.

## Method B – Step 2) Measure & Mark Bracket Spacing

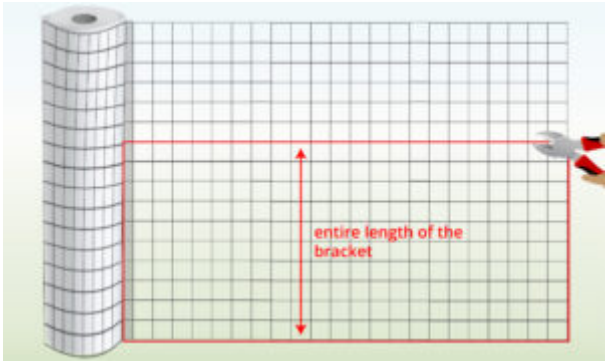

- Use a tape measure to mark where the brackets should be attached to the fencing.

## Method B – Step 3) Fix Brackets

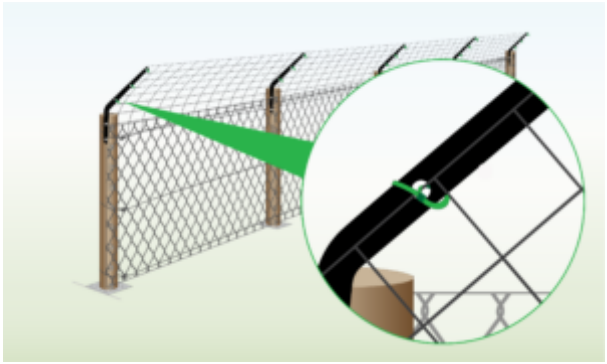

- Use wood screws to attach the brackets in the marked locations.
- Continue this process until you complete the whole area.

## Method B – Step 4) Cut Mesh

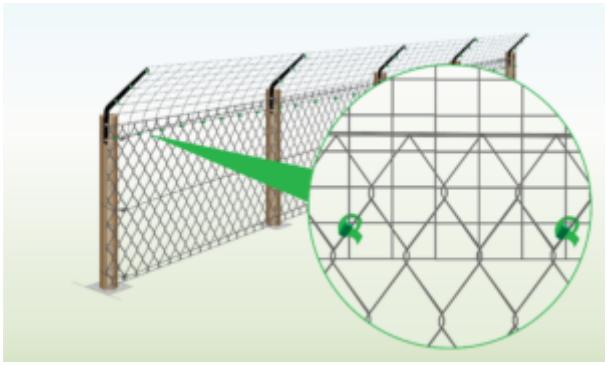

- Choose a mesh roll with a height matching the length of the brackets.
- If the mesh roll is taller, measure the length of the bracket, mark the line, and cut using wire cutters.

## Method B – Step 5) Attach Mesh to Brackets

- Use cable ties to attach the mesh to the pre-drilled holes in the brackets.
- If there aren't any, loop the cable ties around the entire bracket instead.

## Method B – Step 6) Secure Mesh to Chain Link

- Use cable ties or wire ties, spaced 15 cm apart, to secure the bottom of the mesh to the fence.

## Method B – Step 7) Finish Fence Run & Inspect

- Ensure thorough inspection of the netting for any weak spots.

## Tips

- Consider rights, approvals from neighbours, and regulatory obligations before making changes.
- Choose fencing that is at least 180 cm (6 ft) tall, or extend your current fencing if it is shorter.
- Use solid fencing to deter your canine from seeing and chasing small animals.
- A cheap way to keep dog from jumping fence is to remove objects that could allow it to climb over.
- Consider using microchips, a collar ID tag, or tracking devices; and also keep an eye on your dog.
-

## Dos

- Regular exercise and teamwork during dog walks prevent issues from boredom or loneliness.
- Play often and create a playful environment.

- Obedience training is essential in many cases.
- Consider both your dog's breed and personality when making decisions.

### Don'ts

- Avoid invisible or electric fences due to the time and training required for your canine to learn their boundaries.
- Avoid yelling or using frightening devices like electric collars or fences.
- Punishment tools can harm your bond with your dog and may cause issues like anxiety and aggression, so it's best to avoid them.
