

DIY CHICKEN WIRE JEWELRY HOLDER

Step by Step Guide

What You'll Need:

- Chicken Wire
- Packing Tape
- Frame
- Paint
- Staple Gun
- Wire Cutters
- Sandpaper
- Pliers

Step 1

Use a tape measure to find out the inner size of your frame. This step is easier done early when the frame still has the backing inside.

Step 2

Take out the glass and the backing if your frame has any. If it has a shiny coating, slightly sand the frame so you can paint it in the next step.

Step 3

Paint the frame with any color that you would like, and then let it dry. If you'd like a more opaque finish, you can add a second coat as well.

Step 4

Use a fine sandpaper to slightly distress the paint. This will give the end result an aged look.

Step 5

Now that the frame is ready, cut a slightly bigger piece of the chicken wire mesh than the measurements you've taken at Step 1. Use gloves to protect your hands.

Step 6

Attach the mesh to the right side first with a staple gun at every second opening.

Step 7

Staple along the top of the frame as well, just like you did with the right side.

Step 8

When stapling along the left side and the bottom, make sure to always pull on the mesh slightly to straighten it.

Step 9

To prevent damaging the wall or your hands, cover the ends of the mesh with packing tape.

Step 10

Now that you are all done, you can hang your jewelry on this finished DIY project.
