

## HOW TO INSTALL PEGS In The Ground

### THINGS YOU'LL NEED

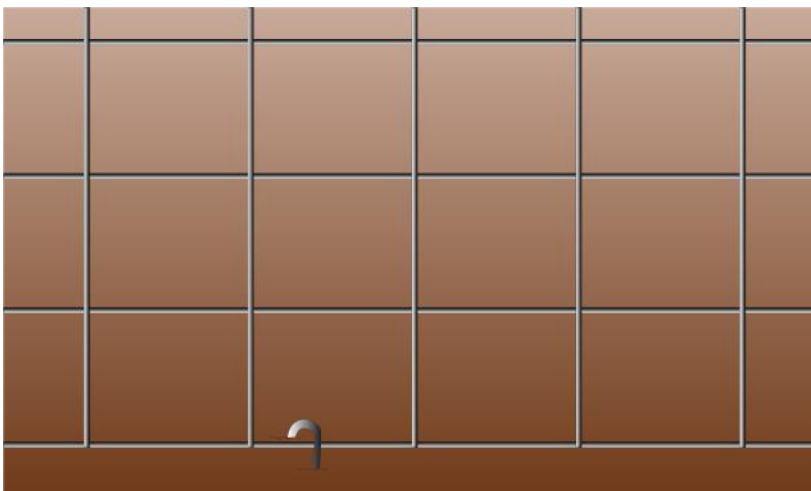

- [Pegs](#)
- Hammer
- Protective gloves

**INSTRUCTIONS****Step 1: Position the Pegs**

Choose the locations for the pegs and position them accordingly. Ensure they are evenly spaced and aligned, especially if you're installing multiple pegs.

**Step 2: Start Hammering**

Begin striking the top of the peg with the hammer. Direct your aim towards the center of the peg to distribute force evenly. Start with light taps to get the peg started into the ground.

**Step 3: Check the Pegs**

Once all the pegs are in place, assess their stability by gently pulling or pushing on them. They should be firmly secured in the ground with minimal movement.
