

HOW TO MAKE Gabion Bin Store

What You'll Need:

- Gabion baskets
- Gabion stone
- Helicals or Tying wire
- Geotextile
- Gravel or Basecourse
- Bin
- Protective gloves
- Tape Measure
- Spirit level
- Spray paint
- Spade
- Shovel
- Tamper

1 Plan the Layout

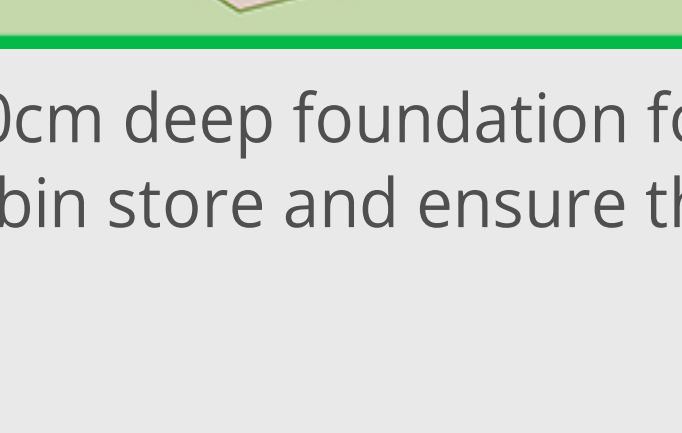

Begin by measuring your space, then plan the layout of your gabion bin storage.

2 Mark the Location

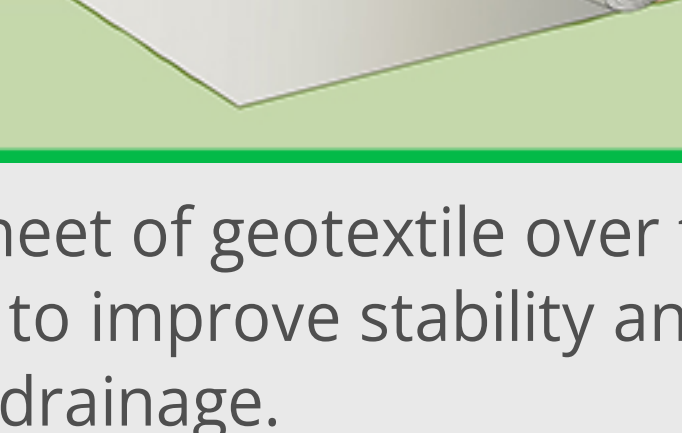

Mark the locations for the baskets using spray paint.

3 Dig a Base

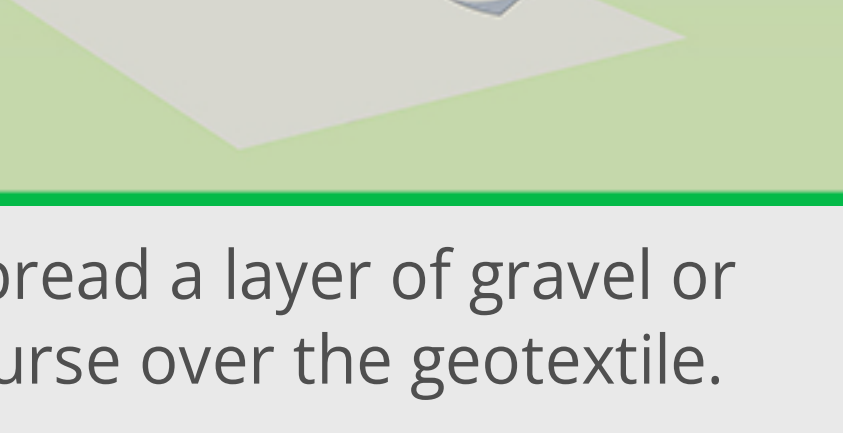

Dig a 10cm deep foundation for your gabion bin store and ensure the surface is level.

4 Add Geotextile

Lay a sheet of geotextile over the ground to improve stability and allow proper drainage.

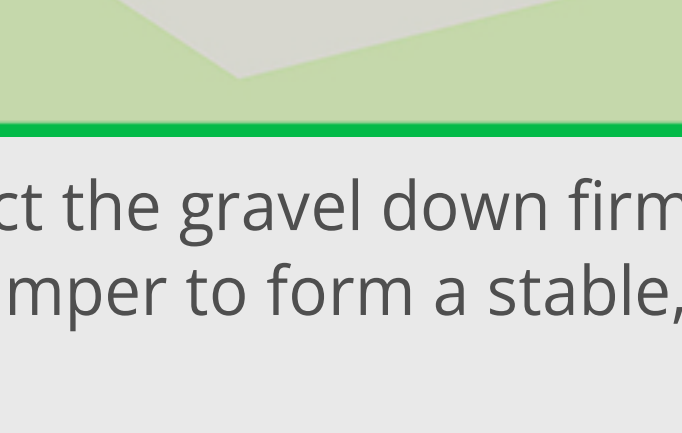

5 Gravel or Basecourse

Then spread a layer of gravel or basecourse over the geotextile.

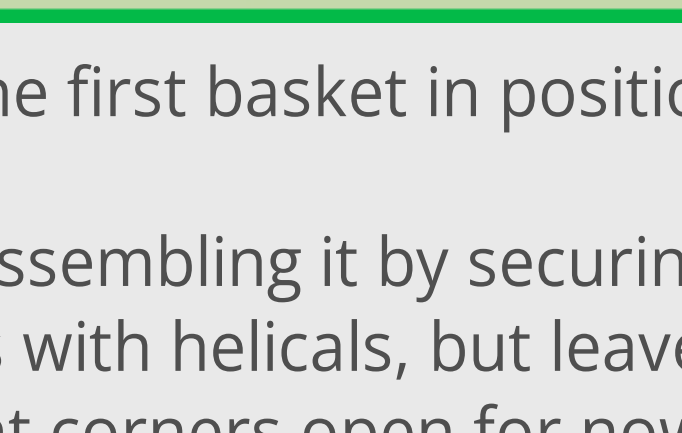

Optional: add a concrete base for extra strength.

6 Compact Base

Compact the gravel down firmly with a hand tamper to form a stable, even base.

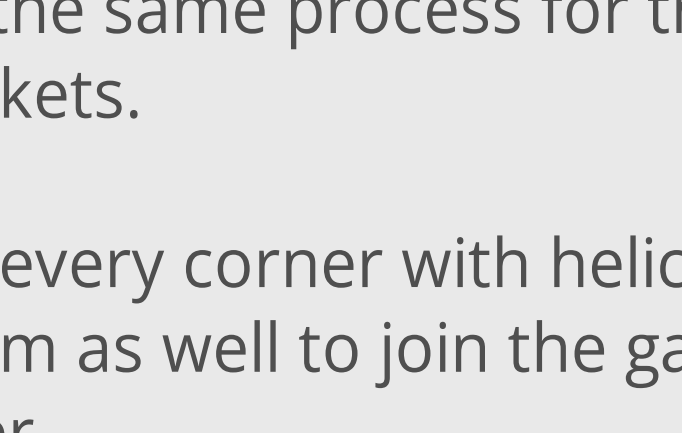

7 Assemble Gabion

Place the first basket in position.

Begin assembling it by securing the corners with helicals, but leave the adjacent corners open for now.

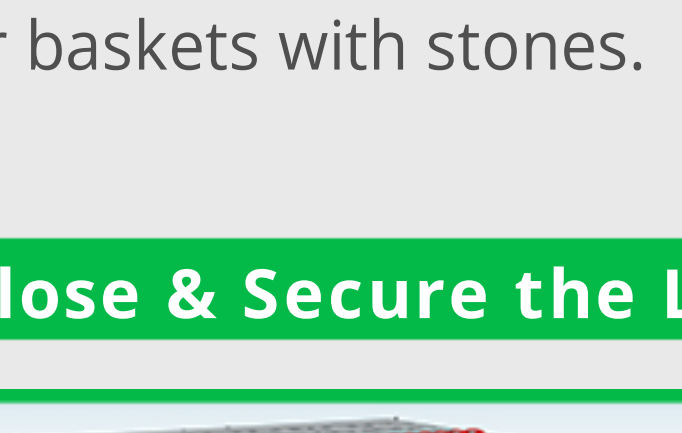

8 Position and Secure

Follow the same process for the rest of the baskets.

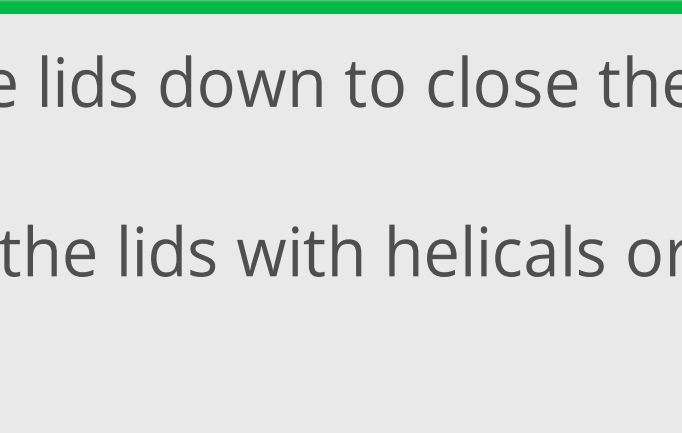

Secure every corner with helicals, and use them as well to join the gabions together.

9 Fill with Stone

Fill your baskets with stones.

10 Close & Secure the Lids

Fold the lids down to close the baskets.

Secure the lids with helicals or tying wire.

11 Position the Bin

Lastly, move the bin into its final position.
